

RoomGuard™

A unique solution for
a growing threat

Audiotel International

Audiotel has been designing and manufacturing equipment used in the detection of Electronic Eavesdropping (TSCM) devices since 1979 and today is the market leader in this technology, a position we are proud to have held for a number of years.

Audiotel's extensive range of TSCM products is available throughout the world via a network of authorised dealers ensuring that product, support and training are readily available.

Audiotel is committed to long-term development of customer-led products and services. We believe in forming strong long-lasting relationships with our customers and have a long list of satisfied blue chip clients. The needs and aspirations of our customers drive Audiotel's vision of the future. We will continue to design and create new products and assist organisations globally to protect the spoken word.

Training

Our commitment to training our customers extends beyond simple use of the equipment we manufacture and supply, we also offer a suite of training programs designed to de-mystify electronic countermeasures.

Courses are held twice a month and can be booked through our website or direct by phoning Audiotel.

The electronic eavesdropping threat

In the days of the Cold War, spying and audio-surveillance were something of an elite profession limited to government agencies. Equipment was made especially for these agencies and training kept exclusive and highly secret.

In more recent times, with information becoming increasingly accessible and technology advancing rapidly, anyone has the potential to become a spy. The Internet provides a 24 hour gateway to thousands of websites providing in-depth instructions on which listening or 'bugging' devices to purchase and effective deployment methods. Entering keywords such as 'bug' into major search engines produces millions of results.

In the Price Waterhouse Coopers report for the UK Department of Trade and Industry: '2004 DTI Information Security Breaches Survey' it was estimated that in 2004, 68% of UK businesses will suffer at least one malicious security breach, rising to 91% for larger companies'. Most companies now have building protection, internet protection, a policy for shredding sensitive documents, but no protection against eavesdropping.

“All information has a price. Today it could be worth millions, tomorrow it could be worth less”

The solution

Eavesdropping devices come in a variety of different forms and the Countermeasures equipment available has traditionally been designed to be specific for a particular type of device. This has meant that an investment in several different pieces of equipment was necessary, making the cost of equipment high; however, investment and development in technology by Audiotel International Ltd brings a simpler yet powerful solution to protecting your meetings.

RoomGuard™ is a new concept in audio/video counter surveillance protection, offering 24 hour, on-line protection of your most important rooms. Whether you are being 'attacked' by radio listening devices, Mobile Phones (GSM, 3G), Bluetooth, WiFi you can be confident that your meetings will be safe.

Distributed intelligence means that several rooms can be simultaneously monitored across your network, even remotely using the software's ability to make a secure connection to the internet.

Real-time protection means that should the threat be brought into the protected meeting room then detection will be instantaneous and alarms can be audible, graphic or sent using email or SMS messaging.

“You no longer have to mind your words to mind your business”

The complete service

In conjunction with specially selected Audiotel partners **RoomGuard™** is available as a package which includes a preliminary full 'sweep' of your offices to ensure that there are no radio devices in the protected room prior to installation.

But it doesn't stop there. We believe that not only is bugging a growing threat but listening devices are getting more clever. Support packages will be available* to give you even more peace of mind. These packages will include annual testing, software upgrades, replacement product in the unlikely event of a failure, sweeping, meeting monitoring (remotely or on-site) at a special rate.

*(Content of support package is dependant on level of support purchased. Check with authorised **RoomGuard™** partner for details).

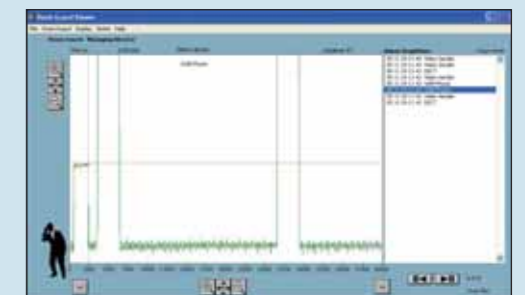

Alarm Annunciator

User Benefits

- Simple to use
- 24 Hours monitoring
- Integrated sensors optimises detection of suspicious devices
- Special Analysis Software helps identify the threat
- Known signals can be filtered out
- Storage of data enables room definition to be compared
- Alarm graphics enables quick identification of room under threat
- Peace of mind
- System continues to monitor room even if network fails
